

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Cotton Cultivation.

I.

Reclass 9-30-40 mg 25

The climate and soil of the northern part (down to 32° of latitude) of the Argentine Republic is most appropriate for the production of cotton, principally in the provinces and territories situated on the banks of the rivers Paraná, Uruguay, and Paraguay, in the Provinces Santa-Fé, Entre Rios, Corrientes, and the territories of Misiones, the Chaco, and Formosa.

In the central and western provinces it also yields good crops; but in some of them, such as San Juan, La Rioja, and Catamarca, irrigation is indispensable, while in the eastern, and especially in the Chaco, the vegetation period of the plant is, as a rule, generally favoured by frequent and abundant rains, but the harvest time coincides with dry weather.

In the colonization epoch, or that of the Spanish dominion, cotton cultivation was very much diffused in in all the calid parts of the ancient Vice Royalty of Buenos Aires—that is to say, the northern part of the Argentine Republic, Paraguay, and Bolivia.

The people in that epoch knew the art of spinning cotton and weaving common stuffs for their own use and commerce, to such an extent that, due to the almost complete absence of currency, in consequence of the extreme

restrictive measures relating to commerce implanted by the Spanish Government, the use of woven cotton stuffs as a monetary medium became generalized for operations of buying and selling.

Subsequently, in several regions of the country the custom of cultivating a few cotton plants of the local subaborescent varieties, and which yield a beautiful white and smooth fiber, which is used for knitting stockings for household consumption and other uses of handiwork, has been retained.

II.

The importation first and the manufacture at home afterwards, of machine woven stuffs with foreign raw material had extinguished, almost completely, the original cotton-cultivation industry, notwithstanding the recognised advantages of this country for cotton-cultivation; but in the course of the last few years interest has revived, due to the excellent financial results obtained in the Chaco, in the neighbourhood of its capital—Resistencia—situated opposite the city of Corrientes. At present calculations show 1500 to 2000 hectares (3706 to 4942 acres) under cultivation in the Chaco and on the opposite bank in the Province of Corrientes, this cultivation extends to somewhat south of the 28° of south latitude, while last year there were only 400 hectares in the colonies near Resistencia and nothing worth mentioning in the Province of Corrientes.

Some forty years ago — about 1862 to 1864 — the cultivation of cotton in the Republics of the River Plate (Argentina, Paraguay, and Uruguay) created a great sensation, due to the repeated propaganda of an English newspaper in Buenos Aires — "The Standard" — and whose eminent editor, Mr. Michael G. Mulhall, author of the useful and well-known "Dictionary of Statistics," ably seconded by the Cotton Supply Association of Manchester, interested in the propagation of cotton cultivation

in these countries, to supply the British factories with the textile, whose importation had diminished in consequence of the civil war in the United States.

In that epoch the Governments of the Argentine Republic, Paraguay, Uruguay and the Province of Corrientes, dictated measures tending to foment cultivation, seeds and instructions were distributed and gining machinery was imported. In Paraguay the cultivation of cotton was declared obligatory, and Mulhall proved the existence of 30,000 acres (12,140 hectares) planted with cotton. In most of the provinces of the Argentine Republic, including that of Buenos Aires, which is too far South, many cultivation experiments were made of North American and Egyptian varieties, generally with excellent results, as regards yield and quality. In reference to the first, Mr. Mulhall stated that "it must be further observed that the average yield in some of the above provinces (Corrientes, Entre Ríos, and Santa Fe) has been found more than double that of the Southern States of North America," and, as regards the second, the samples sent to England appeared so satisfactory that, while the middle class of American cotton was valued at 24 pence the pound, offers at 28 pence for that of Paraná (Entre Ríos), and 30 pence for that of Catamarca were made.

Unfortunately, "the cotton fever" that Mr. Mulhall proposed promoting by his propaganda and his work was extinguished by the bellic invasion of the Paraguayan autocrat, Francisco Solano Lopez, in the Argentine Republic and Brazil, creating a war of five years' duration, which miscarried the fine agricultural movement to which we refer.

All the details appear in the pamphlet published by Mr. Mulhall under the title of "Cotton Fields of Paraguay and Corrientes," being an account of a tour through these countries, "Preceded by Annals of Cotton Planting

in the River Plate Territories from 1862 to 1864. (Barnes)
 After 1864 only a print and regarded very rare.

11.

Outside the indigenous varieties, I present a few of the introduced kinds of North America, are cultivated, and experiments are being made Egyptian kinds, particularly Janowitz and Mr. A. A.

AMONG THE AMERICAN VARIANTS, THE BEST KNOWN IS THE
LAWSONIA, AN OLD OR SHORT STAMPED ONE OF THE LOUISIANA
TYPE AND KNOWN IN THIS COUNTRY BY THAT NAME.

THE LUTHER, FLEISCH AND KUSSE "big-ba" have
as a preliminary, some "urban" and perhaps some
others on the oil or plants, on large scale and
would not then serve as a base for cotton cultivation in
the Atlantic region. The more mentioned Louisiana
and the other, more productive and which the Chaco
of the region has received. In that region, but
possibly the oil is a special specialization.

THE DEFENDANT'S CONDUCT IN THE PRESENT VIOLATION OF THE COUNTY COMMISSIONER'S ORDINANCE AGAINST BRUISE MAKING, WAS UNLAWFUL IN THAT IT TOOK PLACE IN THE STREET AND IN THE PRESENCE OF OTHERS, AND IT CAUSED DAMAGE TO THE DEFENDANT'S REPUTATION.
